Team Allocation

Project Specification

Coursework brief and marking scheme PDF

Overview

This module is assessed through **two pieces of coursework** completed in the same team. You will work on **one substantial practical project** (chosen from the project options provided on ELE) and deliver:

- **Coursework 1 (Week 5):** Prototype v1 + Prototype Report + Live Demo
- **Coursework 2 (Week 11):** Final Prototype + Final Report + Client Handover Pack + Presentation + Individual Reflection

All submissions are made **on ELE**. Your **GitHub repository** is used to evidence professional practice (e.g., commit history, issues, pull requests) but **is not the submission route**.

Assessment components and weighting

Coursework 1 — Prototype v1 and Demo on 19 February 2026 by 12 Noon

You will deliver a working **prototype**, a **prototype report**, and a **10-minute live demo**.

Coursework 2 — Final Delivery and Handover on 26 March 2026 by 12 Noon

You will deliver the **final prototype**, a **client handover pack**, a **final report**, a **10-minute live presentation/demo**, and an **individual reflection** (submitted separately by each student).

Marking rubric: The marking rubric used to assess the work is provided in the assessment brief (see the "project specification" section).

Key dates and milestones

- **Week 1:** Team formation and project selection/assignment
- **Week 2–4:** Build + testing + report drafting (prototype scope)
- **Week 5: Coursework 1 submission on ELE + live demo session on 19th February 2026**
- **Week 6–9:** Build + evaluation + hardening + handover materials
- **Week 10-11: Coursework 2 submission on ELE + final demo/presentation session**

(Exact dates/times will be announced on ELE announcements.)

Teams, projects and demo logistics

Team size

- Teams will normally be **6–8 students**.

Project options

- There are **12-15 project options**, each provided as a detailed project specification on ELE.
- Each team completes **one** project option only.

Live demo/presentation format

- You will do a **10-minute live demo/presentation** in the scheduled session.
- The module runs **one demo session only**, with approximately **7 hours** total allocated.
- Your demo must work **online**. You must provide:
  - A **deployed URL** for the live demo (preferred), and
  - A **local run guide** (in case the deployed environment fails).

Usage of AI Tools — AI-Minimal

These tasks assess your problem-solving ability. **You may not use AI tools for generating code or code autocomplete.**

The University of Exeter is committed to the ethical and responsible use of Generative AI (GenAI) tools in teaching and learning, in line with our academic integrity policies where the direct copying of AI-generated content is included under plagiarism, misrepresentation and contract cheating (TQA Manual Chapter 12.3).

This assessment falls under the category of **AI-Minimal** in the University's guidance. This means:

- **Permitted:** AI tools may be used **only** for checking **spelling and grammar mistakes**, with no other impact on the structure or content of the assessment.
- **Not permitted:** Using AI tools for any other purpose (including generating code, suggesting code, paraphrasing, content generation, or substantial translation beyond a word/short phrase).

- **Do not upload** sensitive or identifying material to any AI tool.
- **Do not present** AI-generated material as your own work.

Submission requirement: When submitting on ELE, you must tick the declaration confirming adherence to academic conduct and the GenAI expectations in this brief.

Professional practice notice (GitHub activity): Your coding activity must be completed in your GitHub repository. Commit and contribution logs may be reviewed where academic integrity concerns arise.

Testing requirements (mandatory for all projects)

Testing is **required** for every project and every team.

You must submit BOTH:

1. **Automated test suite** that markers can run (with clear instructions), **and**
2. **Manual end-to-end test plan** with evidence of results (e.g., screenshots/log extracts)

Your project specification states the minimum expectations (e.g., minimum automated tests and minimum manual scenarios). If markers cannot run your tests using your instructions, marks will be reduced.

What to submit on ELE (ZIP structure matters)

Important submission rule

All group deliverables must be submitted on ELE as **one ZIP file** (per coursework). GitHub is referenced inside the ZIP but is not the submission route.

Coursework 1 submission (February 19, by 12 Noon)

Submit on ELE: `GroupX_CW1.zip`

Your ZIP must contain **exactly** the following structure:

```
ZIP root/
  0_admin/
    submission.txt
    team_members.txt
  1_report/
    cw1_prototype_report.pdf
  2_process/
    scrumboard_export.pdf
    meeting_minutes.pdf
    risk_register.pdf
  3_ethics_and_licensing/
    ethical_and_legal_considerations.pdf
    licence_decision.pdf
    software_data_inventory.xlsx
  4_technical/
    source_code_snapshot.zip
    deployment_guide.pdf
    testing_evidence.pdf
  5_presentation/
    cw1_demo_slides.pdf
```

What goes in key files (CW1)

0_admin/submission.txt must include:

- Group number
- **GitHub repository URL**
- **Deployed demo URL**
- Any demo/test account credentials (low-privilege only, if needed)

1_report/cw1_prototype_report.pdf must clearly include:

- What you built (prototype scope) and what is not yet built
- Prioritised requirements and prototype goals
- Architecture overview and data model overview
- Evaluation approach used so far (even if small-scale)
- Risks and plan for Coursework 2

3_ethics_and_licensing/ must include:

- Ethical and legal considerations relevant to your project (privacy, harm, accessibility, security, etc.)
- Your licensing decision and justification
- A software/data inventory listing dependencies and datasets used (with licences)

4_technical/testing_evidence.pdf must include:

- Proof your automated tests run
- At least one completed end-to-end manual scenario with evidence
- Clear pass/fail outcomes

Coursework 2 submission (26 March by 12 Noon)

Submit on ELE: `GroupX_CW2.zip`

Your ZIP must contain **exactly** the following structure:

```
ZIP root/
  0_admin/
    submission.txt
    team_members.txt
  1_report/
    cw2_final_report.pdf
  2_handover_pack/
    handover_index.pdf
    deployment_and_operations.pdf
    maintenance_and_troubleshooting.pdf
    data_management.pdf
  3_process/
    scrumboard_export.pdf
    meeting_minutes.pdf
    risk_register_final.pdf
  4_ethics_and_licensing/
    ethical_and_legal_considerations_final.pdf
    licence_decision_final.pdf
    software_data_inventory_final.xlsx
  5_technical/
    source_code_snapshot.zip
    testing_evidence.pdf
    security_checklist.pdf
  6_presentation/
    cw2_final_slides.pdf
```

Individual reflection (separate ELE submission)

Each student must submit **one PDF** separately:

- **File:** `reflection.pdf`
- **Length:** 800–1,000 words
- **Must include:**
  - Your individual contribution (with evidence links to commits/issues/PRs)
  - What you learned (technical + teamwork/process)
  - What you would do differently next time
  - A short statement confirming **AI-Minimal compliance**

GitHub professionalism

GitHub is used to evidence professional practice. Your repository should show:

- Regular commits by the team (not one big upload at the end)
- Issues/tasks linked to work completed
- Evidence of teamwork (e.g., branching/PRs where appropriate)
- Clear README and run/test instructions (also included in the ELE ZIP via deployment_guide.pdf)

Accessibility, ethics, and responsible computing

You are expected to demonstrate:

- Accessibility awareness (basic keyboard navigation, readable layout, mobile-friendly where relevant)
- Security basics (no secrets in repo/ZIP, safe demo accounts, sensible data handling)
- Ethical and legal thinking (privacy, harm risk, licensing/IP, fairness where relevant)
- Societal and environmental impact reflection appropriate to your project

Where to find the project specifications and rubric

- The **12-15 project specifications** are provided in the **Project specification tile** of ELE as downloadable documents.
- Each specification includes:
  - Required features and dataset expectations
  - Testing requirements
  - Deliverable expectations for CW1 and CW2
  - The marking rubric on the Assessment Brief and marking tile

Marking and Feedback

Marking and feedback will be provided in a two phases:

1. A group presentation will be held with each group in the week of the submission to present the contents of the submission. Each group will receive a mark and verbal feedback for their collective submission indicating performance on different aspects of the submission. This is not a final mark but will give an indication of group performance and feedback.
2. Individual final marks combining the collective mark from the group presentation, group submission and individual peer review, will be released to individual students through ELE on the usual three week turnaround.

Mitigation

Note: there will be no extensions for submissions this module.

If an individual has mitigating circumstances that affect their participation in the module only that individual can apply for mitigation.

Adjustments for individuals

- If you are unable to contribute for more than one sprint please apply for mitigation and note the request for deferral. We can't provide adjustments if more than one submission is affected so the only option at this point is deferring the assessment to the summer.

Adjustments for the group where there is mitigating circumstances for a team member:

- Expectations for the volume of work will be adjusted (applications from smaller groups will have less features) based on the number of active members in each group. The active members of each group should be listed by name in the submission README. If a member of a group could only participate for part of the sprint due to personal circumstances this should also be noted in the README. Only the duration of the circumstances stopping the member participating needs to be noted in the group files, please do not provide details of the personal circumstances for the individual affected.

Frequently asked questions

Do we submit on GitHub?
No. You submit on ELE as a ZIP. GitHub is referenced in `submission.txt`.

Can we demo online?
Yes. Your system should be demo-able online. Provide a deployed URL and a fallback local run guide.

Can we use AI coding assistants?
No. This is an AI-Minimal assessment: spelling/grammar checks only.

What happens if our tests are not runnable?
Marks will be reduced. Your tests must be runnable by the markers using your instructions.
